PROFILE

Driven and detail-oriented aspiring Software Engineer with a specialization in front-end development. Passionate about crafting innovative and user-friendly solutions. Eager to leverage my skills in JavaScript, HTML, CSS, React, Python and Data structures to tackle real-world challenges. A lifelong learner, I'm committed to continuous growth and thrive in collaborative environments.

EDUCATION

■ Microverse - Software Development Program

- Completed an intensive remote software development program focused on full-stack web development, with hands-on coding experience in a collaborative, multicultural environment.
- Gained proficiency in technologies such as JavaScript ,React, and Git, while working on real-world projects and collaborating across time zones.
- Developed strong skills in remote teamwork, communication and project management through daily standups, pair programming and peer code reviews.

■ ALX- Software Engineering Program

- Completed a rigorous software engineering program with a focus on real-world problem-solving and hands-on coding.
- Acquired skills in Python, C, data structures, algorithms, and Linux, with extensive experience in collaborative coding and agile project workflows.
- Developed critical thinking and technical proficiency through challenging projects, peer reviews, and guided mentorship, preparing for fast-paced tech environments

EXPERIENCE

Pixel Bloom - Web Developer   Nov 2024 - Present

- Designed, developed, and optimized responsive websites for clients.
- Collaborated with designers and marketers to create visually appealing, high performing sites. Built and maintained websites using React, Next.js, and WordPress.
- Ensured seamless user experiences with a focus on UI/UX and SEO best practices.
- Improved website performance, cross-browser compatibility, and accessibility.
- Integrated third-party tools like Google Analytics, marketing automation platforms, and CRM systems.

PROJECTS

Valeria Villas Marketing Website

- Developed a responsive real estate marketing website for Valeria Villas.
- Built with React, Next.js, and Tailwind CSS for a modern and optimized user experience.
- Integrated SEO best practices to enhance search visibility.
- Added interactive property listings and filtering options for better navigation.

Spotify Clone

- Built a Spotify-inspired music streaming web app as a school project.
- Developed using React, Redux, and Firebase for real-time data and authentication.
- Implemented music playback, playlists, and user authentication features.
- Designed a sleek, mobile-friendly UI with Tailwind CSS.

Hotel Management System

- Developed a hotel management system using Python for booking and customer management.
- Implemented features like room reservation, check-in/check-out tracking, and billing.
- Used file handling and data structures to manage customer records efficiently.
- Designed a console-based UI for user interaction.
